---

Jennifer,

As we discussed, using the three samples with fines content between 81.5% and 83.2% as proposed is approved.

Regards,

Subject: upstream sediment samples

---

Hi Gary-

As we discussed this afternoon, Integral obtained only 7 samples within the target grain size distribution for the SJRWP upstream sediment sampling (as described in Sediment SAP Addendum 1). We'd like to add three samples nearest the top end of that range to provide both better spatial coverage for the sampling event, and to obtain the full target of 10 samples. The percent fines on the three samples proposed for analysis is 81.5, 82.3, and 83.2 percent.

With your approval, we'll go ahead and add these three to the 7 that fit into the target range, and proceed with analysis of dioxins and furans and organic carbon.

Thank you,

*Jennifer*
